

## 1). Pandemic Employees

The world is currently faced with the threat from various antibiotic drug resistant infectious and communicable diseases such as:

- XDR TB (Extensively Drug Resistant )
- SARS
- H5N1
- Swine Flu

Business must reduce absenteeism by risk management and personnel protection. This short course at your premises (London area) will provide your employees with all the basic information and advice that will reduce their fear and potential risk of contracting any disease.

This short course provides:

- What is the difference between epidemic-pandemic
- Why we should be concerned about emerging disease
- How infection is spread person to person
- Simple and recognized defence measures
- Hand washing and proof that most need training
- Why masks won't provide protection to the healthy
- Why masks must be used by those infected
- What types of protection will work
- How to select and fit test protective devices
- Vector agents (how germs & virus spread)
- Personal Hygiene
- Travel to and from work
- Why the work place is safer than home.

The course lasts approximately 3 hours.
