

Module 5

Health & safety

Written by Jeff Charlton

This Health & Safety module revolves around legislative and liability issues but clearly focuses on employee safety issues in the post disaster event.

It is fully recognised that companies have professional risk managers or indeed qualified health and safety personnel. Unfortunately in a post disaster scenario, risks and hazards can be novel and compound and often a rolling risk assessment has to be undertaken to accommodate constantly changing hazards and risks. The module provides useful pointers and examples of best to proceed safely.
